We know that having convenient access to clean, safe drinking water is one of the main reasons people turn to Primo's Self-Service Refill Water, you're choosing water that has gone through a purification process that includes carbon filtration, ultraviolet sterilization. and reverse osmosis. In order to ensure that the water you load into your Primo Water Dispenser retains its clean, fresh, and delicious taste, we recommend that you clean your Water Dispenser once every three months (unless, of course, you have opted for our Deluxe Bottom-Loading Water Dispenser with Self-Sanitization, which cleans itself!). The process is simple and we want to walk you through it! Why Should You Clean Your water dispenser? Cleaning your water dispenser? Cleaning your water dispenser? drinking safe, clean, and high-quality water in every glass. Plus, cleaning your water dispenser only takes about 30 minutes of your time once every three months. So show your dispenser some love! What Supplies Do You Need to Clean Your Dispenser? Everything you need to clean your Primo Water Dispenser is easily found around the house or at a local store. You'll need: two tablespoons of regular bleach or two cups of distilled white vinegar, one empty 5-gallon bucket, and a Phillips head screwdriver. What Steps Should You Follow to Clean Your Dispenser? There are 13 simple steps to cleaning your Primo Water Dispenser: Turn energy saving switches to OFF. Unplug power cord from wall outlet. Remove the cap from a spare empty 5 gallon bottle. Pour the bleach (2 tbsp.) or vinegar (2 cups) and hot tap water (2 Gallons) into the empty bottle. Apply the cleaning solution to fill the reservoirs. Wait 10 minutes then drain the water from the reservoirs as described in step 5. Rinse the bottle and fill with only hot tap water and apply it to the dispenser. Place a two gallon bucket in the back of the appliance and remove the drain cap. Return the unit to its location, install a fresh water bottle, plug the power cord into the grounded wall outlet and turn the energy saving switch ON. That's all there is to it! And, don't worry visual learners, we've also published a video version of these instructions to make cleaning your Primo Water Dispenser even easier. As always, if you still have questions about this process, email us (Annie and Kaitlan) at betterwater@primowater.com and we'll be happy to answer your questions! Due to the power outages caused by the severe winter weather, a number of our refill stations are currently out of service in the impacted areas. We apologize for the inconvenience and will provide an update as conditions change. Please stay safe. Top Loading Dispenser Questions My top-loading water dispenser is leaking. Yes, all probes are adjustable. At the top of the probe, there are tabs that when pressed together simultaneously will release the bottom portion to adjust to a 3 gallon bottle. Where can I find my dispenser's manual? Click here to view all dispenser manuals. Countertop Dispenser Questions Does your Primo Dispenser need cleaning? YES! It is important to note that every machine comes with an instruction manual. They exist for many reasons. Primo Water Dispenser manuals come with a maintenance section. So, to thoroughly clean your Primo dispenser, you will need:2 tablespoons of regular unscented bleach, or 2 cups of distilled white vinegar1 two-gallon bucketA spongeSmall funnelPhilips head screwdriverReady to clean? Here's how:Make Your Cleaning SolutionIn a bucket, pour two tablespoons of bleach into two gallons of hot water. Wear a disposable glove to avoid any reaction and gently mix the solution. If you are using vinegar, mix the two cups of vinegar, mix the two cups of hot water together in a bucket. Take the Dispenser Things ApartBefore doing this, ensure you switch OFF the energy-saving switches of the dispenser five minutes before the cleaning time. Also, unplug the power cord from the wall socket and shift the appliance away from the wall. This will offer you easy access to the back of the dispenser. Then, proceed to remove the dispenser's water bottle. Next is to drain the water from the dispenser's reservoir through the hot and cold taps into a bucket. Pour the Cleaning Solution Into the Water CoolerPour the mixture into the dispenser, make sure the solution fills the reservoir, and allow it to sit for 10 minutes. Clean the inner surface of the machine with a sponge dipped into the cleaning solution. Scrub Well the Drip Trav and Water TapsUsing the sponge, give the drip tray and water taps a thorough scrub and rinse with clean water. Then, dry thoroughly, so no moisture is left in any tight space. Rinse the Cleaning SolutionPour hot water into the dispenser and thoroughly rinse four times. Do this properly to ensure no bleach or vinegar taste remains. At the back of the appliance, place a two-gallon bucket. Remove the drain plug, open the hot and cold taps, and allow it to flush out from the three openingsClean Your Hands ThoroughlyWash and dry your hands before touching the dispenser or its parts to avoid further contamination. Replace the drain plug and cap, and lock the hot and cold taps. Then return the appliance to its previous position. Load the dispenser with a fresh water bottle. Plug the power cord back into the wall socket and turn the energy-saving switch back ONCleaning Cold Reservoir and Water Lines Dispenser water lines need a weekly deep cleaning because of lime-scale build-ups, which can reduce your dispenser's life span. Lime-scales are the hard, chalky substance that builds up where water is cold, heated, or left. To clean this off, use a Philips screwdriver to unscrew the plastic tubing water lines inside your dispenser. Allow the ice builds in the dispenser to defrost thoroughly. Pour 3-4 cups of distilled white vinegar into the water lines through a small funnel. Let it soak to break down lime-scales for about 10 minutes. Run the vinegar in the water lines with clear water and screw back the plastic tubing water lines. Water dispensers help make cold water readily accessible at the click of a button. Like every other appliance, they require periodic cleaning and maintenance. A dirty water dispenser produces germs and bacteria that can cause several severe health conditions like Legionnaires' disease, which grows into pneumonia. To prevent having a dirty water dispenser: Follow InstructionsEvery product comes with an instruction manual that tells an end-user how to use the product. According to Vanguard Resources, water coolers should be cleaned whenever a new bottle is to be used or every six weeks. Make Cleaning a Habit Research showed that the Heterotrophic Plate Count (HPC) of water coolers exceeded the acceptable level for drinking by over 60%. HPC is a standard for measuring the quality of water and the number of bacteria present in water dispensers. Maintaining the habit of cleaning your water dispenser regularly can help prevent the development of bacteria inside the water cooler. The Influence of the Water source can negatively impact health by causing severe infections like diarrhea. Water source can negatively impact health by causing severe infections like diarrhea. reduce the life span of the cooler. More so, tap water likely contains elements that build up lime-scales in the dispenser, which can negatively affect health. This can affect both the taste and quality of water from the cooler. Just like any machine, Primo Water Dispenser might have little set-backs, which is not a problem. Every problem has a solution, right. Here are some troubles you might encounter using your dispenser, and proven solutions: If Your Water is at room temperature, turn off the dispenser's energy switch. Move the machine away from the wall so you can access the dispenser dial. The dial is located near the rear condenser coil of the dispenser and looks like a gold-brass, screw. With your screwdriver, twist the dial clockwise a bit, then put on the energy switch. It should make your water cold. If Your Water is Not Dispensing From Either TapIf the water bottle seal is not set correctly, water will not enter the reservoir. No water in the reservoir means that water will not dispense from the machine. To let you know, the machine will start blinking. To solve this, secure the nozzle and seal the bottle correctly. If Water is Leaking from the TapTo fix this issue, no tools are needed. All you need to do is to remove the Primo water bottle, then remove and empty the plastic receptacle. You will also notice there is water, empty 8-16oz of water from the tap into a cup. Then, rightly position the receptacle with the squared art aligned with the back edge of the dispenser. You will need to set a new water bottle. So, peel off the seal from the new bottle cap and carefully place it onto the water dispenser seems to have this issue after using it for about five to six months. However, a new machine might have a similar problem. But it is a straightforward fix. The tap nozzle has a filter-like screen that might be clogged because of some tiny particles from the water bottle. The tap nozzle has an edge-like feel. So, using a plier, pull the nozzle out and give it a proper cleaning. It should get the water flowing freely again. To fix this issue on a new dispenser, hold down the cradle for 2 to 3 minutes. It will fill up the reservoir with water. Yes. To enjoy clean water taste, your water dispenser should be cleaned and maintained to prevent bacteria build-up. Sanitize your dispenser every six months. How Can I Get the Bleach Taste Out of My Dispenser? The reason your dispenser has bleach taste is that the bleach used in washing the machine was not properly rinsed out. To rid your dispenser of this taste, rinse your dispenser of this taste, rinse your dispenser of this taste. other standard water bottles. How Should I Store My Dispenser When Traveling? To keep your water dispenser safe while on a trip, unplug it and drain out water from the reservoir. Leave it dry until you are ready to use it again. Does Water Dispenser Purify Water? Some water dispensers are designed to serve as water purifiers and dispense 100% clean water. Most also come with a hot and cold dispensing tap. Water dispensers are great investments. They can be trusted to serve and produce water anywhere and at the nick of time. Though Primo water dispensers develop issues over time, as most machines do, they are easy to fix. They also offer a cold and hot water feature that is adjustable to suit any weather condition. Knowing how to clean Primo water dispenser will offer you the privilege of staying healthy and free from bacterial infections and lime-scale build-ups.
